

Chengxuan (Teemo) Weng

teemow0106@163.com | +86 18817218761

Education

Imperial College London

MSc, Business Economics and Strategy

Sep 2025 – Nov 2026

University of British Columbia (UBC)

Bachelor, Finance

Sep 2021 – May 2025

- Exchange program at School of Management, Fudan University (Sep 2023 – Jun 2024)
- Honors & Awards: International Student Scholarship (2025), Kenneth G. Young Memorial Scholarship (2024)

Internship Experience

Alibaba Group

AI Product Intern (Space Leasing)

Jun 2026 – Present

- **Space leasing product line (leasing management system MIS):** The team owns MIS, the leasing management system behind Alibaba's leasing business (office, retail, co-working, etc.) across 30+ campuses nationwide, covering the full leasing lifecycle from deal signing, contract fulfillment, and billing & collection to move-out settlement. Supported the AI upgrade of the product line: through on-site campus visits and in-depth interviews with frontline operations staff, systematically mapped the SOPs and data definitions of the five high-frequency scenarios (renewal, expansion, termination, collection, client visits) as the business foundation for AI product design
- **Campus billing-manager AI skill design:** Addressing frontline pain points (manual screening of overdue bills, no risk tiering, no closed loop after collection), designed a conversational billing-manager skill on the in-house campus management agent, enabling operations staff to complete the full loop of querying arrears, assessing risk, sending collection notices, verifying payments, and generating reports in natural language; defined core business rules and I/O specs including payable-bill criteria, three-tier overdue-day risk classification, and contract-level deposit over-coverage; delivered the final PRD and a conversational demo, advanced toward implementation through multiple product and engineering reviews
- **AI operations workbench design:** Based on field research into the operations role and leasing-system business logic, designed a four-in-one campus operations workbench (data overview + client ledger + scenario pipelines + AI assistant): built the operations-side leasing ledger with the client as the smallest unit, pipelined the five scenario SOPs into drag-and-drop trigger-process-close Kanban flows, and designed three tiers of AI capability (Q&A, assessment, generation & execution) plus a client-360 panel rendered per scenario node; independently delivered a high-fidelity interactive prototype and full PRD, iterated through multiple team reviews

Beike (KE Holdings)

AI Product Intern (Business Analysis)

Jul 2025 – Sep 2025

- **Strategic research & financial modeling (AI PM assistant MOMA):** Focused on market-entry and monetization assessment for MOMA, an AI product-manager assistant. Benchmarked competitors such as Readdy, Figma, and Lovable, finding their positioning concentrated on prototyping and single-point productivity gains; defined MOMA's differentiation as a one-stop AI solution covering user research, PRD writing, prototyping, and test validation for end-to-end PM enablement. Built multi-scenario financial models on user growth, feature usage, and pricing to estimate monetization potential and ROI, supporting management decisions on market entry and resource allocation
- **Overseas growth operations:** Systematically compared growth playbooks across Product Hunt (launch & long-tail traffic), Twitter/X (topics & engagement), Reddit (community rules & precise entry), YouTube/TikTok (content & paid traffic), and LinkedIn (B2B lead generation) to formulate a differentiated overseas growth plan

POIZON (Dewu)

Product Operations Intern

Sep 2023 – Nov 2023

- **Analyzed B2B seller transaction fees on POIZON's overseas platform.** Across the US, Canada, Japan, and Korea, benchmarked POIZON against StockX, GOAT, and Alias on technical/operation/transaction-processing fee rates and min/max charges; proposed measures to raise overseas seller activity and engagement in standard-shipping and consignment models (better search accuracy, simplified listing, overseas online support, newcomer incentives)
- **Conducted B2B seller survey research.** Designed monthly in-app surveys for four seller segments covering listing (search-based/opportunity-recommended), bulk repricing, logistics (standard shipping/consignment), authentication, commissions & penalties, and customer support, turning seller feedback into feature-iteration proposals; researched churned sellers and summarized causes and fixes (slow reviews, failed listings, high authentication-warehouse logistics costs)

Activities

Hinbor — Campus Group-Order Food App Product Manager (Consumer Product)
(North America)

Mar 2022 – Sep 2023

- **Product positioning:** A pickup/group-order dining and light-social platform for university students; secured exclusive in-store discounts through merchant negotiations backed by targeted campus traffic, and drove value-for-money and repurchase with free delivery plus tiered group-order discounts
- **Core consumer features:** Two main paths, in-store pickup discounts and tiered group-order discounts, supporting delivery-fee-free pickup and multi-user group orders. Owned the simplification of ordering and in-store redemption (coupon placement, arrival confirmation, exception/refund loop) and group-order rule design (initiate/join, auto-form or dissolve on timeout, one-click share-and-follow in group chats); validated and iterated rapidly via prototype, walkthrough, and small-traffic gray release
- **Core merchant features:** Minimal merchant onboarding and menu listing (license upload, storefront setup, bulk import of SKUs and multi-pricing), with one-click migration of menus and assets from UberEats/Meituan; self-serve marketing configuration (discounts, spend thresholds, group-order tiers, ranked exposure slots) and a basic operations dashboard; defined merchant roles and permissions with onboarding checklists and guides to lower learning costs
- **Product operations:** Adopted a merchant-first cold start — onboarded campus merchants with university endorsement, then acquired users via canteen promotion, WeChat community fission, and Xiaohongshu seeding. Reached 3,000+ users and 30+ merchants per campus within 3 months of launch.

Skills: SQL, R, Python, Excel, Tableau, Power BI, Figma, Axure, Claude Code, Codex
